Hey Ger,

Here is a list of AIDs for you to work with for genetics. The dataset I have goes up through 2018 (125 unique IDs). But I deemed years 2006 and earlier, 2008, and 2018 all to be 'bad' years with unequal sampling across the park. Individuals collared in those years only were removed (25 IDs). The attached provides the details of the other 100. The top 83 individuals in this list should be your priority. Let me know if you have questions.

Jerod
